| Abstract Title | ROLE OF ADAPTATION IN ENHANCING HOUSEHOLDS' RESILIENCE CAPACITY TO DROUGHT IN WESTERN INDIA | 1-Line Text |
| Abstract | Although we have observed an increasing trend for reported impact from climate extremes, non-economic loss and damage indicators are most often vaguely reported. Nevertheless, in the developing nations, it is expected to quite significant than the economic, emphasizing to compute both scale and value of non-economic loss and damage. Several planned adaptation measures have also been undertaken to mitigate potential impact. But, limited studies for estimation and examining the effectiveness of adaptation options, especially on non-economic loss and damage. A case study from Gujarat state, in western India has been taken up for the analysis – prone to frequent droughts, and both crop-insurance and irrigation are cited as major risk management strategies. This study aims to analyze the role of crop-insurance and irrigation in reporting loss and damage impacts. Risk management strategies of farmers and damage reduction measures were studied from 400 households. Key findings of the study are: | Paragraph |
